

Green Campus & Flora Identification Committee

The Green Campus & Flora Identification Committee of Government Degree College, Bhojpur, Moradabad is committed to fostering environmental sustainability and enriching the green cover of the campus. The committee actively plans and implements initiatives aimed at creating an eco-friendly, pollution-free, and aesthetically vibrant academic environment.

The committee organizes regular tree plantation drives, maintenance of gardens and lawns, and development of herbal and medicinal plant sections within the campus. Special emphasis is laid on flora identification, where various plant species are scientifically identified, labeled, and documented to promote botanical awareness among students and staff. These efforts help in developing a living laboratory that supports teaching, learning, and research activities.

The committee also conducts awareness programs on biodiversity conservation, waste management, water conservation, and plastic-free campus initiatives. Through active participation of students, faculty members, and volunteers, regular cleanliness drives and plantation campaigns are organized to instill environmental responsibility and a sense of ownership towards nature.

By integrating environmental education with practical engagement, the Green Campus & Flora Identification Committee continuously strives to build a sustainable, healthy, and eco-conscious campus that contributes to ecological balance and community well-being.
